INSTRUCTIONS

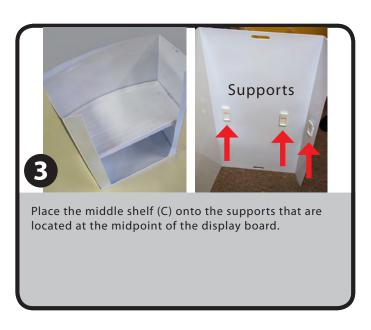

Custom Display Table

Take the display board (D) and clip it into the shelf's edges. The front of the display board should be aligned with the arc of the shelf's base. There are oval tabs on the base shelf that will align with the oval shaped holes on the display board. Be sure to fold the white flaps of the board so that they are tucked into the ridges along the backside of the base shelf.

Now place the top shelf (B) onto the top of the display board with the textured side facing up. In the same way that you connected the display board to the base, be sure that the display board is clipped within all of the shelf's edges. There are oval tabs on the top shelf that will align with the oval shaped holes on the display board.

Take one pole pair (F) and connect them. Then place each of these lengthened poles through the slots located on the top shelf. Be sure to align the base of each pole with the indents provided on the middle shelf.
