

# INSTRUCTIONS

## Custom Display Table

### Includes:

- 3 Shelves (A, B, C)
- 1 Display Board (D)
- 1 Display Head (E)
- 4 Pole Segments (F)
- 2 Pole Headers (G)

**1** Place base shelf (A) on the floor. Be sure to orient the shelf with the textured side on the ground and the smooth side facing upwards.

**2** Take the display board (D) and clip it into the shelf's edges. The front of the display board should be aligned with the arc of the shelf's base. There are oval tabs on the base shelf that will align with the oval shaped holes on the display board. Be sure to fold the white flaps of the board so that they are tucked into the ridges along the backside of the base shelf.

**3** Place the middle shelf (C) onto the supports that are located at the midpoint of the display board.

**4** Now place the top shelf (B) onto the top of the display board with the textured side facing up. In the same way that you connected the display board to the base, be sure that the display board is clipped within all of the shelf's edges. There are oval tabs on the top shelf that will align with the oval shaped holes on the display board.

5

Take one pole pair (F) and connect them. Repeat with second pole pair. Place each assembled pole through the slots located on the top shelf, making sure the base of each pole aligns with the indents on the middle shelf.

6

Remove strip from pole headers to expose adhesive. Place each on the display head (E) in the marked spots making sure the open ends are pointing downward.

Attach the display head (E) to the top of the poles. If the booth is too high for you to place the display head on the top of the poles, attach the display head to the top of the poles prior to placing them through the slots located on the top shelf.
