# Art Checklist

1. Use VECTOR file format
Vector artwork allows us to resize properly without pixelating or losing quality.
Make sure Illustrator art files are saved in the CS6 version.

2. Submit raster images at 300 DPI
We prefer vector art, but if it must be a raster image or a photograph, we will have no control over the color output of the print.

3. Outline ALL Text

4. Define colors as Pantone Solid Coated
If you do not provide PMS colors, we will define them for you based on the closest color our software determines. The colors will be listed on the proof, and you will have the opportunity to review and change if necessary.

5. Provide 2" of bleed around artwork

6. Compress files larger than 8MB
For larger files please upload your artwork to Quinn Flags through the following link: https://quinnflags.wetransfer.com. Upload instructions here.
To make sending art easier you may also compress your artwork using either WinZip or WinRar. Please note we cannot accept StuffIt files at this time.
